## STRAW / CHAISE, Paola Navone

Simple and refined, the Straw chair family, with and without armrests, is characterised by the structure in tubular aluminium painted embossed Slate. A slender and light product covered with a handwoven weave with a double torsion polyethylene rope, a fibre with a natural, strong, flexible and durable appearance designed specifically for outdoor use.

The weave used in the collection is developed using a double twist rope in high-density polyethylene, mixed with ecological colourings. Specifically designed outdoor furniture, the fiber resists against solar radiation, moisture and water (including sea water and chlorinated water).
