MEDITERRANEO / TABLE,
Francesco Meda

The table from the Mediterraneo collection, made of natural teak, combines elegance and versatility. The top is available in white Carrara marble, Pearl concrete, Lava Stone gres, or textured back-painted green glass, adapting to any style.

The tops are finished with protective coatings, that never make the surface impervious, but are useful to slow down absorption of liquids. Cleaning: use water and a neutral detergent on the surface. Avoid direct contact with aggressive chemicals substances, solvents, ammonia, inks, oily soaps, lemon, wine, coffee. In case of contact, rinse the surface immediately and thoroughly. Natural teak: These products are made of solid teak wood, coming from Burma plantations, Indonesia. The material is not treated, but its unique inner oily resin naturally improves its impermeability and resistance, even to insects and parasites. By exposure to the air, light and weathering, its colour changes and turns into different shades of grey. A long exposure to the weathering does not prejudice the product stability, but can cause some splits into the wood. An adequate protection is therefore suggested. In some cases, the natural teak can stain light surfaces/fabrics it gets in touch with. We recommend the use of protective gliders and / or other protections, if required. By exposure to the air, light and weather, its colour changes and turns to different shades of grey, typical of old wood. This superficial oxidation contributes, with the oil

moisture, to the long lasting durability of the material itself. A long exposure to different weather conditions does not prejudice the product stability, but can create cracks in the wood. An adequate protection is therefore suggested. White Carrara marble: A naturally compact material, wear and tear resistant, suitable for dining purposes, Carrara marble is treated with a clear matt protective impregnating agent. The presence of micro holes or imperfections is to be considered an intrinsic characteristic of the natural product, claims are not accepted. For the correct maintenance, we suggest to promptly remove any stains from the surface, especially acid substances. Concrete: Tops made from a mixture of cement, polyurethane resin and glass fibre that guarantees an optimal balance of strength, flexibility and durability. Tops made from this composite are additionally protected with a highly resistant two-component polyurethane resin that provides superior protection against wear and stains. Gres Lava Stone: Gres Lava Stone is an innovative material obtained from a mixture of volcanic powders and porcelain stoneware. It is a product characterised by excellent technical and physical performance; its anthracite colour recalls the appearance of freshly solidified lava stone. The absence of porosity guarantees mechanical resistance and greater durability against atmospheric agents. Gres Lava Stone is designed to resist temperature changes with a water absorption of 0.08% and a chemical resistance that keeps its surface intact. Back-painted glass: Cast glass modelled on a texture that gives personality and character to the underside of the glass. Once cooled, the top is back-painted to add colour and brilliance.
